

## Materials testing seminar by Fischer GB proved to be in great demand

Fischer Instrumentation (GB) Ltd was delighted with a full house of twenty for the first in a series of coating thickness and materials testing seminars. The positive feedback from the delegates, ranging from Ph.D. through to hands-on shop floor personnel, was extremely encouraging and many took maximum advantage by taking along their own measuring samples for testing and discussion.

Dr Staib of Fischer Instrumentation (GB) Ltd commented: 'We are pleased to have hit on a formula that gave maximum benefit to the majority of the attendees. There is a definite need for long established, well respected multinational companies like Fischer to share the vast wealth of technical and practical materials testing know-how on a local basis. The demand, including a waiting list, and the positive feedback demonstrates this'.

The seminar was at the professional and comfortable surroundings of the Corus Hotel in Solihull, Warwickshire on 20<sup>th</sup> May 2010, where all participants received a certificate as evidence of the educational merit of the seminar. Details of the next seminar will be posted on the website [www.fischer-material-analysis.co.uk](http://www.fischer-material-analysis.co.uk) and published in the trade press. If you wish to be notified of the next event directly, then please use the Contact Us form on the website above or contact Claire Devlin at Fischer Instrumentation (GB) Ltd – 01590 684100 or email [cdevlin@fischergb.co.uk](mailto:cdevlin@fischergb.co.uk).
